SUMMARY

I'm a Python backend developer, currently working as a Mid-level Data Analyst at Vitru Educação, where I built and maintain in production the instructor allocation optimizer (FastAPI, React, TypeScript, OR-Tools), which assigns about 200 instructors to more than 350 classes per module. In my own projects I ship end-to-end products backed by automated tests, CI on GitHub Actions and architecture decisions recorded as ADRs. I study Software Engineering at Uninter and I'm looking for a junior backend developer role.

EXPERIENCE

Vitru Educação (UniCesumar) — Hybrid, Maringá, Brazil
Mid-level Data Analyst, Academic Planning — 03/2026 - Present

- Built and maintain in production the instructor allocation optimizer, with a FastAPI API, a React and TypeScript interface and an OR-Tools CP-SAT solver. The system assigns about 200 instructors to more than 350 classes per module in minutes, work that used to take weeks in spreadsheets.
- Maintain in production the weekly curriculum pipeline for UniCesumar and Uniasselvi (Python, SQL Server), which reads 6 input layouts, runs 4 validation layers and keeps an auditable history.
- Moved the planned-vs-actual audits from Power Query to Python, over datasets from 1 million to more than 40 million rows.
- Built the 2027 student enrollment forecasting model (Python, DuckDB, Parquet), with 50 automated quality checks and error below 2% against actuals.
- Rewrote in Python and Marimo the lab class demand vs. tutor capacity model, with a simulator by campus and city. Refresh the Power BI dashboards for managers and directors every week.
- Work in a Kanban flow on Microsoft Planner: requests from managers and directors go through refinement and are worked under WIP limits, with daily stand-ups, a weekly review and deliveries tracked per week and per project.

Linoforte Móveis — Osvaldo Cruz, Brazil
Assistant Operator — 06/2022 - 12/2025

- Set up monitoring of production and quality KPIs, which exposed recurring stoppages and guided corrective actions in the process.
- Mapped bottlenecks and downtime and proposed improvements that reduced rework and waste on the production lines.

PROJECTS (github.com/guilhermerissondev)

- **Job Hunters**: live job-matching SaaS (job-hunters-ebon.vercel.app) with FastAPI, SQLAlchemy, Alembic, PostgreSQL/pgvector and Next.js. Collects about 98k jobs from 649 sources and sends the matching ones on Telegram, each with the CV experience that supports it. Deployed on Vercel, Render, Neon and Supabase, CI on GitHub Actions, 380 tests and 21 ADRs.
- **Guia do Mercado**: Telegram bot (TypeScript, grammY) with a Python crawler and a PostgreSQL database that builds a shopping list with the price range of 20 supermarket chains across 508 regions of Brazil, from about 316k prices collected every week. Shared list and a live demo on the portfolio.
- **Teacher Allocation Optimizer**: the optimizer running in production at Vitru, open source (FastAPI, SQLite, React, TypeScript, OR-Tools CP-SAT), with a scenario engine isolated from the main solver and a live demo on the portfolio.
- **TikTok Viral Generator**: agent that researches, scripts and publishes 4 short videos a day with a source for every fact (Python, Pydantic, SQLite, ffmpeg). 691 automated tests.

EDUCATION

B.S. in Software Engineering - Uninter - 10/2026 - 2030 (in progress)
AI Software Engineer 4.0 Program (360 h) - Data Science Academy - 09/2026 - 12/2026 (expected)
Postgraduate Certificate in Data Science (360 h) - UniCesumar - 03/2026 - 10/2026
B.S. in Civil Engineering - FAI, Faculdades Adamantinenses Integradas - 2021 - 2025

SKILLS

Languages: Python, TypeScript, SQL
Backend: FastAPI, Pydantic, SQLAlchemy, Alembic, REST APIs, pytest, Docker, GitHub Actions (CI/CD), Git, Linux
Frontend: React, Next.js, Tailwind CSS
Databases: PostgreSQL, pgvector, SQL Server, SQLite, DuckDB
AI and LLM: RAG, hybrid search (BM25 + embeddings), structured output, LLM evaluation, agents, Gemini API
Data: pandas, Parquet, OR-Tools (CP-SAT), Power BI
Agile methods: Kanban (Microsoft Planner), WIP limits, daily stand-ups, refinement, weekly review
Spoken languages: Portuguese (native), English (advanced), Spanish (basic to intermediate)
